Performance Analysis

Investment Objective and Strategies

The Portfolio seeks to achieve steady income and to ensure invested capital preservation. The Portfolio invests primarily in debt instruments of Canadian and foreign issuers. The Portfolio may also invest in equity securities of Canadian and foreign issuers paying dividends or income. The Portfolio Manager uses a top-down global active short-term management approach, including to set the duration of the portfolio. The implementation of dynamic positioning strategies on the yield curve, the choice of classes of issuers and the selection of securities are based on quantitative and qualitative comparisons, and simulations on interest rates, yield differentials, currencies and volatility.

Risk

The Portfolio invests primarily in debt securities, both Canadian and foreign. Derivatives may also be used for hedging purposes or to establish market positions. The risks related to investments in the Portfolio remain as set out in the Simplified Prospectus. The risks associated with the Portfolio and its holdings are as follows: credit risk, sector risk, foreign securities risk, large transactions risk, specific issuer risk, currency risk, interest rate risk, derivatives risk, securities lending risk, exchange-traded funds risk, asset-backed and mortgage-backed securities risk, multi-series risk, short selling risk and loss restrictions risk.

Operating Results

The FDP Canadian Bond Portfolio, Series A posted a net return of 8.4% for 2020, versus 6.3% for 2019. The FDP Canadian Bond Portfolio, Series I posted a net return of 9.4% for 2020.

In the context of a global economy weakened by a pandemic, governments and central banks introduced unprecedented fiscal and monetary measures, which relieved markets and economies. The Bank of Canada has announced quantitative easing measures, purchasing government of Canada, provincial and corporate bonds. In the last few months of 2020, positive news about COVID-19 vaccines, central banks' intention to maintain an accommodating monetary policy for an extended period and the U.S. President-elect's plan to introduce additional stimulus contributed to market performance late in the year.

Accordingly, the bond market, as measured by the FTSE Canada Universe Bond Index, posted an 8.7% return. The 10-year government of Canada bond yield declined by 103 basis points in 2020, causing the spread between long- and short-term yields to narrow significantly. Credit spreads for both provincial and corporate bonds widened in the first quarter of 2020 before narrowing in the following quarters in response to positive news about COVID-19 vaccine development and the governments' and central banks' support of markets and economies.

Recent Developments

There are currently no events to report for 2021.

Related Party Transactions

The Manager of the FDP Canadian Bond Portfolio is Professionals' Financial – Mutual Funds Inc. The Manager is in charge of the portfolio's research, analyses, selections and transactions. The Investment Committee of Professionals' Financial – Mutual Funds Inc. supervises the execution of the mandates entrusted to the internal managers and to other external managers, as the case may be.

Monthly management fees, calculated daily at an annual percentage of the Portfolio's net assets after deducting the value of interfund investments, are paid to the Manager.

⁽¹⁾ The information is derived from audited annual financial statements in accordance with International Financial Reporting Standards (IFRS). In compliance with these Standards, net assets per unit presented in the financial statements generally equal the net asset value calculated to establish unit prices.

⁽²⁾ Management expense ratio includes management fees and operating expenses. It excludes income tax withheld on dividend income and transaction costs, and is expressed as a percentage of the daily average annualized net asset value during the fiscal year.

⁽³⁾ The Fund's portfolio turnover rate indicates how actively the Fund's portfolio manager manages its portfolio investments. A portfolio turnover rate of 100% is equivalent to the Fund buying and selling all of the securities in its portfolio once in the course of the year. The higher a Fund's portfolio turnover rate in a year, the greater the trading costs payable by the Fund in the year, and the greater the chance of an investor receiving taxable capital gains in the year. There is not necessarily a relationship between a high turnover rate and the performance of a Fund.

⁽⁴⁾ The trading expense ratio represents total commissions and other portfolio transaction costs expressed as an annualized percentage of daily average net asset value of each series during the year.

Management Fees

Series A and Series I units pay management fees to the Manager, Professionals' Financial – Mutual Funds Inc., for service rendered to the unitholders, and investment management and administration services. Series A units' annual management fees of 0.85% and 0.05% for Series I are calculated daily according to the net assets and paid monthly after deducting the value of interfund investments. For 2020, Series A units paid \$3,332,000 and \$8,000 for Series I to the Manager.

Past Performance

Information on performance presupposes that the Portfolio's distributions during the years presented have been totally reinvested in additional units of the same series. The returns do not include deductions for sales fees, transfer, redemption or other optional fees (because there are none) or income taxes payable, and would be lower if they included such items. The Portfolio's past performance is not necessarily indicative of future performance.

Annual Performance

The following bar graphs indicate the Portfolio's annual returns for each year. They show the year-to-year variation in the Portfolio's return. The graphs present, in percentage form, what would have been the upward or downward variation, on the last day of the year, of an investment made on the first day of that year.
