Performance Analysis
Investment Objective and Strategies

The Portfolio seeks to achieve steady income and to ensure invested capital preservation. The Portfolio invests primarily in debt instruments of Canadian and foreign issuers. The Portfolio may also invest in equity securities of Canadian and foreign issuers paying dividends or income. The Portfolio Manager uses a top-down global active short-term management approach, including to set the duration of the portfolio. The implementation of dynamic positioning strategies on the yield curve, the choice of classes of issuers and the selection of securities are based on quantitative and qualitative comparisons, and simulations on interest rates, yield differentials, currencies and volatility.

Risk

The Portfolio invests primarily in debt securities, both Canadian and foreign. Derivatives may also be used for hedging purposes or to establish market positions. The risks related to investments in the Portfolio remain as set out in the Simplified Prospectus. The risks associated with the Portfolio and its holdings are as follows: credit risk, sector risk, foreign securities risk, large transactions risk, specific issuer risk, currency risk, interest rate risk, derivatives risk, securities lending risk, exchange-traded funds risk, asset-backed and mortgage-backed securities risk, multi-series risk, short selling risk, loss restrictions risk, cybersecurity risk and liquidity risk.

Operating Results

The FDP Canadian Bond Portfolio, Series A posted a net return of 2.33% for 2025, versus 4.0% for 2024. The FDP Canadian Bond Portfolio, Series I posted a net return of 3.3% for 2025. The bond market, as measured by the FTSE Canada Universe Bond Index, posted a 2.64% return for the year.

In Canada, inflation remained within the Bank of Canada's target range in 2025. The central bank continued normalizing policy, cutting the key rate four times from 3.25% to 2.25%. The yield curve continued to steepen in 2025, with short-term rates falling more than long-term rates. In addition, credit spreads on provincial and corporate bonds generally tightened after "Liberation Day", continuing a trend that began in 2023. These developments reflect diminishing fears of a recession and investor optimism about economic growth and moderating inflation.

The FDP Canadian Bond Portfolio's yield curve positioning and its overweight to corporate bonds contributed positively to relative returns. The Portfolio also benefited from the steepening of the yield curve due to its underexposure to 30+ year maturities and its overexposure to 15 – 20 year maturities. The same strategy was applied to the 7-year segment as was used for the 10-year segment. Narrowing yield spreads, combined with overexposure to corporate and provincial bonds, had a positive impact on relative performance.

The Portfolio remains underweight to sovereign bonds and overweight to provincial bonds. Regarding corporate bonds, the portfolio manager favours high-quality issues from the Banking, Telecommunications, Industrials and Oil Pipelines sectors while maintaining an underweight to long-term corporate bonds.

⁽¹⁾ The information is derived from audited annual financial statements and unaudited interim financial statements in accordance with International Financial Reporting Standards (IFRS). In compliance with these Standards, net assets per unit presented in the financial statements generally equal the net asset value calculated to establish unit prices.

⁽²⁾ Management expense ratio includes management fees and operating expenses. It excludes income tax withheld on dividend income and transaction costs, and is expressed as a percentage of the daily average annualized net asset value during the fiscal year. The management expense ratio takes into consideration the management expense ratios of the underlying funds.

⁽³⁾ The Portfolio's portfolio turnover rate indicates how actively the Portfolio's portfolio manager manages its portfolio investments. A portfolio turnover rate of 100% is equivalent to the Portfolio buying and selling all of the securities in its portfolio once in the course of the period. The higher a Portfolio's portfolio turnover rate in a period, the greater the trading costs payable by the Portfolio in the year, and the greater the chance of an investor receiving taxable capital gains in the year. There is not necessarily a relationship between a high turnover rate and the performance of a Portfolio.

⁽⁴⁾ The trading expense ratio represents total commissions and other portfolio transaction costs expressed as an annualized percentage of daily average net asset value during the year.

Management Fees

Series A and Series I units pay management fees to the Manager, Professionals' Financial – Mutual Funds Inc., for service rendered to the unitholders, and investment management and administration services. Series A units' annual management fees of 0.85% and 0.05% for Series I are calculated daily according to the net assets and paid monthly after deducting the value of interfund investments. For 2025, Series A units paid \$2,356,000 and \$153,000 for Series I to the Manager.

Past Performance

Information on performance presupposes that the Portfolio's distributions during the years presented have been totally reinvested in additional units of the same series. The returns do not include deductions for sales, transfer, redemption or other optional fees (because there are none) or income taxes payable, and would be lower if they included such items. The Portfolio's past performance is not necessarily indicative of future performance.

Annual Performance

The following bar graphs indicate the Portfolio's annual returns for each year. They show the year-to-year variation in the Portfolio's return. The graphs present, in percentage form, what would have been the upward or downward variation, on the last day of the year, of an investment made on the first day of that year.
